

RE : BuildTechAsia 2013

BuildTechAsia 2013 was held from 31 July 2013 to 2 August 2013 at Expo Hall 4. Returning for the third consecutive year, the event continues its purpose to give a medium for visitors, exhibitors, government officials and industry players to mingle and discuss possible business opportunities.

This year, staff from Swee Hong Limited worked together to set up a booth in the form of a comfortable and creative living space within a 'box', presenting our very own objective of 'a Technology-driven Construction and Engineering Company Filled with Trusted People'.

Needless to say, the event ended successfully with various exhibitors showing their latest innovative projects, ranging from IT and Building Information Modelling (BIM) concepts, building materials, electrical and mechanical engineering processes, as well as the newest machines.
